Claude Code Prompt: Bulk User Agent Checker for dev.deacyde.com

> **Copy everything below this line and paste it into Claude Code (or GitHub Copilot) while in the dev.deacyde.com repo root.**

The Prompt

```
I need you to build a new app for my portfolio site at dev.deacyde.com called
"Bulk User Agent Checker."

## CONTEXT — What This Tool Does

This is an SEO/AI bot access auditing tool. The user enters one or more URLs or
domains, and the tool checks how each URL responds to a variety of bot user agents
— SEO crawlers, AI training bots, and search engine bots. It sends HTTP HEAD
requests impersonating each bot's User-Agent string and displays the HTTP status
code returned, so you can see at a glance which bots a site allows (200), blocks
(403/451), or restricts.

This is useful for SEOs and webmasters who want to audit robots/AI bot access
policies across multiple domains at once.

## REFERENCE — Study My Existing Apps First

Before writing any code, read the source of these existing apps in my repo to
understand my patterns, styling, layout structure, nav, CSS variables, and
conventions:

- `apps/link-checker.html` — closest pattern match (input → table results with
filters)
- `apps/subdomain-finder.html` — similar fetch-and-display pattern
- `apps/page-compare.html` — multi-URL input pattern
- `apps/anomaly-detector.html` — data display with status indicators
- `index.html` — the main site for nav structure and overall design language

Match the exact same:
- Page structure (back link, emoji title, subtitle, input area, stats cards,
filter tabs, results table)
- CSS approach (dark theme, card styling, color-coded status badges, responsive
design)
- Font stack, spacing, border-radius conventions
```

- "← Back to Deacyde.com" link at top pointing to `https://dev.deacyde.com/index.html#apps`

WHAT TO BUILD — Feature Spec

Input Section
- Textarea for bulk URL/domain entry (one per line, support both `https://example.com` and bare `example.com`)
- Pre-populated placeholder showing example domains (e.g., cnn.com, nytimes.com, reddit.com)
- "Check All" primary action button
- "Clear" secondary button
- A small helper text: "Enter URLs or domains, one per line. We'll check how each responds to common bot user agents."

User Agent Categories & Strings
Organize into 3 categories with these bots (use their real, current UA strings):

AI Training Bots:
Bot Name	User-Agent String
GPTBot	`Mozilla/5.0 AppleWebKit/537.36 (KHTML, like Gecko); compatible; GPTBot/1.2; +https://openai.com/gptbot`
ChatGPT-User	`Mozilla/5.0 AppleWebKit/537.36 (KHTML, like Gecko); compatible; ChatGPT-User/1.0; +https://openai.com/bot`
Google-Extended	`Mozilla/5.0 (compatible; Google-Extended)`
ClaudeBot	`Mozilla/5.0 AppleWebKit/537.36 (KHTML, like Gecko); compatible; ClaudeBot/1.0; +claudebot@anthropic.com`
PerplexityBot	`Mozilla/5.0 AppleWebKit/537.36 (KHTML, like Gecko); compatible; PerplexityBot/1.0; +https://perplexity.ai/perplexitybot`
Applebot-Extended	`Mozilla/5.0 (Macintosh; Intel Mac OS X 10_10_1) AppleWebKit/600.2.5 (KHTML, like Gecko) Version/8.0.2 Safari/600.2.5 (Applebot-Extended/0.1)`
Bytespider	`Mozilla/5.0 (Linux; Android 5.0) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/109.0.0.0 Mobile Safari/537.36 (compatible; Bytespider)`
CCBot	`CCBot/2.0 (https://commoncrawl.org/faq/)`
Meta-ExternalAgent	`Mozilla/5.0 (compatible; Meta-ExternalAgent/1.0; +https://developers.facebook.com/docs/sharing/webmasters/crawler)`

Search Engine Bots:
Bot Name	User-Agent String
Googlebot	`Mozilla/5.0 (compatible; Googlebot/2.1; +http://www.google.com/bot.html)`

Googlebot-Mobile	`Mozilla/5.0 (Linux; Android 6.0.1; Nexus 5X Build/MMB29P) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/W.X.Y.Z Mobile Safari/537.36 (compatible; Googlebot/2.1; +http://www.google.com/bot.html)`
Bingbot	`Mozilla/5.0 (compatible; bingbot/2.0; +http://www.bing.com/bingbot.htm)`
Applebot	`Mozilla/5.0 (Macintosh; Intel Mac OS X 10_10_1) AppleWebKit/600.2.5 (KHTML, like Gecko) Version/8.0.2 Safari/600.2.5 (Applebot/0.1; +http://www.apple.com/go/applebot)`
YandexBot	`Mozilla/5.0 (compatible; YandexBot/3.0; +http://yandex.com/bots)`
DuckDuckBot	`DuckDuckBot/1.1; (+http://duckduckgo.com/duckduckbot.html)`

SEO Bots:
Bot Name	User-Agent String
AhrefsBot	`Mozilla/5.0 (compatible; AhrefsBot/7.0; +http://ahrefs.com/robot/)`
SemrushBot	`Mozilla/5.0 (compatible; SemrushBot/7~bl; +http://www.semrush.com/bot.html)`
DataForSEOBot	`Mozilla/5.0 (compatible; DataForSEOBot/1.0; +https://dataforseo.com/dataforseo-bot)`
ScreamingFrog	`Screaming Frog SEO Spider/20.3`
Sitebulb	`Mozilla/5.0 (compatible; Sitebulb; +http://sitebulb.com)`
SERankingBot	`Mozilla/5.0 (compatible; SERankingBot; +https://seranking.com/seo-spider/)`
MJ12bot (Majestic)	`Mozilla/5.0 (compatible; MJ12bot/v1.4.8; http://mj12bot.com/)`
DotBot (Moz)	`Mozilla/5.0 (compatible; DotBot/1.2; +https://opensiteexplorer.org/dotbot; help@moz.com)`

Stats Cards Row (above results)
Display summary counters:
- Total Checks (total URLs × total bots)
- Allowed (200 count) — green
- Blocked (4xx count) — red
- Redirected (3xx count) — yellow/amber
- Errors (5xx / timeout / network error) — gray

Filter Tabs
- All | AI Bots | Search Bots | SEO Bots | Blocked Only | Allowed Only

Results Table
Columns: `# | URL | Bot | Category | Status | Response Time`

- Status column should be color-coded badges:

  - 200 → green badge
  - 301/302 → amber/yellow badge
  - 403 → red badge
  - 451 → red badge (with a tooltip: "Unavailable For Legal Reasons")
  - 5xx → dark red badge
  - Timeout/Error → gray badge with "ERR" or "TIMEOUT"
- Sortable by clicking column headers (at minimum: URL, Bot, Status)
- Filterable by the tabs above

Additional Features (improvements over the reference tool)
1. **Progress indicator** — show a progress bar during bulk checking with "Checking X of Y..." text
2. **Export CSV** — button to download the full results table as CSV
3. **Export JSON** — button to download results as JSON
4. **Summary Matrix View** — a toggle to switch from the table to a matrix/heatmap grid view where rows = URLs, columns = bot names, cells = color-coded status codes. This is the killer feature — it gives you a visual at-a-glance comparison.
5. **robots.txt quick check** — for each domain, also fetch /robots.txt and parse it to show which bots are disallowed. Display a small "robots.txt" info icon next to each URL that expands/collapses to show the parsed rules.
6. **Batch size control** — let users pick concurrency (1, 3, 5, 10 at a time) to avoid rate limiting
7. **Retry failed checks** — a "Retry Failed" button that re-runs only the checks that returned errors/timeouts
8. **History** — save the last 5 checks to localStorage so users can revisit results
9. **Copy shareable link** — encode the URL list into a query param so results can be shared

Important Technical Notes
- **This is a client-side only app** — a single HTML file with embedded CSS and JS, like my other apps
- **CORS limitation**: Direct fetch from browser to arbitrary domains will hit CORS issues. Use a CORS proxy approach. Options:
  - Use `https://api.allorigins.win/raw?url=` as a CORS proxy
  - Or use `https://corsproxy.io/?`
  - Include a note in the UI: "Results use a CORS proxy and may not perfectly match direct server responses. Some sites detect proxy requests and may return different status codes than they would to the real bot."
  - Let the user optionally input their own proxy URL
- **Rate limiting**: Add a configurable delay between requests (default 200ms) to avoid overwhelming proxies or target servers
- **Timeout**: Set a 10-second timeout per request, show "TIMEOUT" for anything that exceeds it

```
### Page Metadata
- Title: `🤖 Bulk User Agent Checker | Deacyde`
- H1: `🤖 Bulk User Agent Checker`
- Subtitle: `Audit how websites respond to AI, search engine, and SEO bot user agents — in bulk`

### Where to Save
- Save as `apps/user-agent-checker.html` in the repo
- Do NOT modify index.html — I will add the link to the Apps section manually

### Final Checklist Before You Finish
1. Verify it matches the visual style of my existing apps (dark theme, card layout, color-coded badges)
2. Test that the matrix/heatmap view toggle works
3. Ensure CSV and JSON export work
4. Confirm the progress bar updates correctly
5. Make sure it's fully responsive (mobile-friendly)
6. Add the "← Back to Deacyde.com" nav link at top
7. Include a disclaimer footer: "Note: Checks are performed via a CORS proxy. Results may differ from direct server responses. Some servers detect proxy requests and return different status codes. Use a server-side tool for production-grade auditing."
```

Optional: Add to index.html Apps Section

Once the app is built and working, add this card to the `#apps` section of `index.html`:

```html
<a href="https://dev.deacyde.com/apps/user-agent-checker.html">
  <span>🤖</span>
  <h3>Bulk User Agent Checker</h3>
  <p>Check how websites respond to AI training bots, search engine crawlers, and SEO
</a>
```
